

We turn the day into an artificial night!

Prevento[®] dark-night

Film-forming spray-gel to create an

„ artificial night“

Prevento[®] dark night is a water-soluble, easy to spray fluid, with very high adhesive forces on smooth surfaces and with a high opacity*

The higher the opacity of a material the less light passes through.

Prevento[®] dark-night

- Covers solar panels fast, secure and efficiently
- can be easily and evenly applied by spraying
- covers smooth surfaces with a light-proof film
- prevents the further power generation of the solar panels
- is long lasting and does not separate
- does not contain toxic ingredients
- is frost resistant up to -10 °C / 14 °F
- is pH neutral and skin compatible
- is readily biodegradable
- does not create and does not leave any dirt
- is not corrosive and does not leave any residues
- can partly be peeled off similar to a protective film
- can also be easily removed with clean water
